Feature	Description	Benefits
<b>Software Applications</b>	Presenters are free to use any software of their choice by simply launching the software on their desktop. WebDemo is fully application independent. Common programs are PowerPoint, Word and Excel.	No matter what software you use and display on your own desktop, it can be displayed to any number of users. Attendees do not need to have your software application resident on their computer in order to collaborate.
<b>Web Conferences or Meeting Sessions</b>	Schedule or start a Web conference or meeting session at any time or anywhere.	Ideal when necessary to conduct impromptu or unplanned conferences or meetings on the fly.
<b>Cancellation/Rescheduling</b>	Meetings can be easily cancelled and rescheduled with new meeting dates and times immediately forwarded to notify attendees.	Ideal for providing immediate cancellation or rescheduled meeting notices when conferences or sessions cannot be held as specified or planned.
<b>Join a Meeting</b>	Unique meeting numbers are automatically generated for every meeting. Immediately join a meeting by selecting the desired meeting and entering the confirmed meeting number.	Eliminates confusion as to which meeting sessions to attend.
<b>Voice Broadcast</b>	Presenters can broadcast voice dialogue over the Internet and enable voice privileges to selected attendees and conduct a discussion.	Helps eliminate costly conference calls.
<b>Keyboard Chat</b>	Host and attendees can communicate via Keyboard Chat.	Allows host and attendees to converse privately without disrupting the meeting.
<b>Application Sharing</b>	Enables any attendee participating in a Web meeting session to work on any document being displayed and shared.	Leverages existing communications and interaction. Helps participants collaborate in real time to solve problems, exchange ideas and apply solutions on the fly. Reduces travel time and associated travel expenses.
<b>Client Software</b>	Client software or plug-ins are <u>not</u> required.	Browser-based JAVA technology allows attendees to participate using only a Web browser and an Internet connection.
<b>ConnectionPoint</b>	The WebDemo ConnectionPoint application securely sends and receives data.	Securely manages all presentation connections simplifying configuration and precluding firewall-related connectivity.
<b>Viewport</b>	Viewport can be resized from just a portion of your monitor all the way up to full screen representation.	Software that is displayed within the defined outline of the Viewport on your computer desktop is broadcast to attendees. Fully application independent.
<b>File Broadcast</b>	File Broadcast allows the presenter of a WebDemo session to broadcast files to any or all attendees.	Files of any type can be distributed quickly to all meeting participants.

Feature	Description	Benefits
<b>Record and Playback</b>	The Record and Playback feature records a meeting session and saves the recording for playback at a later time. This feature allows the presenter to determine what is to be recorded such as the Viewport, Voice, or Keyboard Chat.	The recorded sessions are thereafter available for meeting attendees to playback whenever they wish to view the recorded sessions.
<b>Outlook® E-mail Integration</b>	The Outlook E-mail Integration integrates Microsoft Outlook® and WebDemo by allowing a meeting session to be scheduled in Outlook from an e-mail produced by WebDemo.	Meetings can be scheduled in the attendee's Outlook Calendar from the e-mails sent by the meeting presenter.
<b>True Color Representation</b>	True colors between 256 colors and High Color (16-bit to 24-bit) are available for added enhancement to the Viewport. This is an excellent feature for advertising and marketing professionals who place a premium on the creative component of their presentations.	Presentations immediately gain more clarity and accuracy with the color added feature.
<b>Video Conferencing —Optional Feature Component</b>	Upon electing to add the Video Conferencing feature component to your WebDemo system, participants attending the meeting session are allowed to send video images from their PC cameras.	Participating members in the Video Conference are then able to view everybody's images that are displayed.
